### Lab 8: Breadth First Traversal

Pseudocode/Algorithm:

1. Create a graph class with a map of vertices and their adjacent vertices
2. Create a method to add a vertex to the graph
3. Create a method to add an edge between two vertices
4. Create a method to perform a breadth first traversal of the graph
5. In the main method, create a graph object
6. Add vertices to the graph
7. Add edges to the graph
8. Call the breadth first traversal method on the graph object
9. Print the results

Code:

No input necessary

Output:

The algorithm works as expected.
